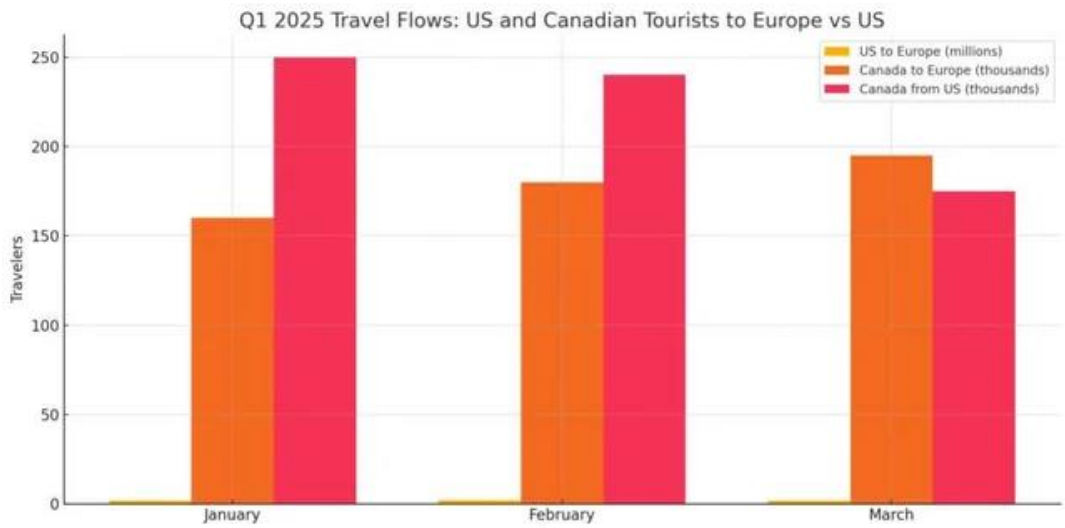
Chart 1



Problems:

- Unit inconsistency: US to Europe is in millions, while the remaining values are in thousands.
- Lack of clear labeling, especially for the travellers. Unit should be specified.
- Unordered:Hard to compare the months.
- Visual issues: Colors are too similar / too unclear (yellow). Values too small (yellow), barely visible.

Corrected:

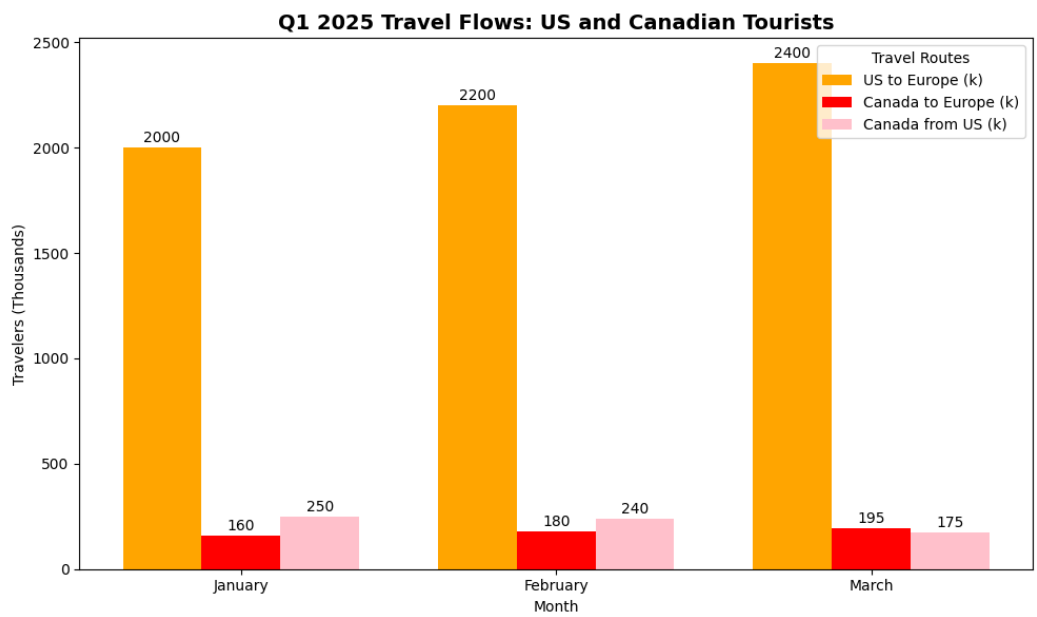


Chart 2

Problems:

- Unit inconsistency: either the billion should be million (atleast for Grok AI) or the chart should be longer for Grammarly. Its clear that its the former.
- Redundant: Both the bars and lables portray value, can be boiled down to 1.
- Unordered: Since its a ranked list, should be ranked lowest to highest or vise versa.
- Visual issues: Everything is one color, including the bars and background.

Corrected:

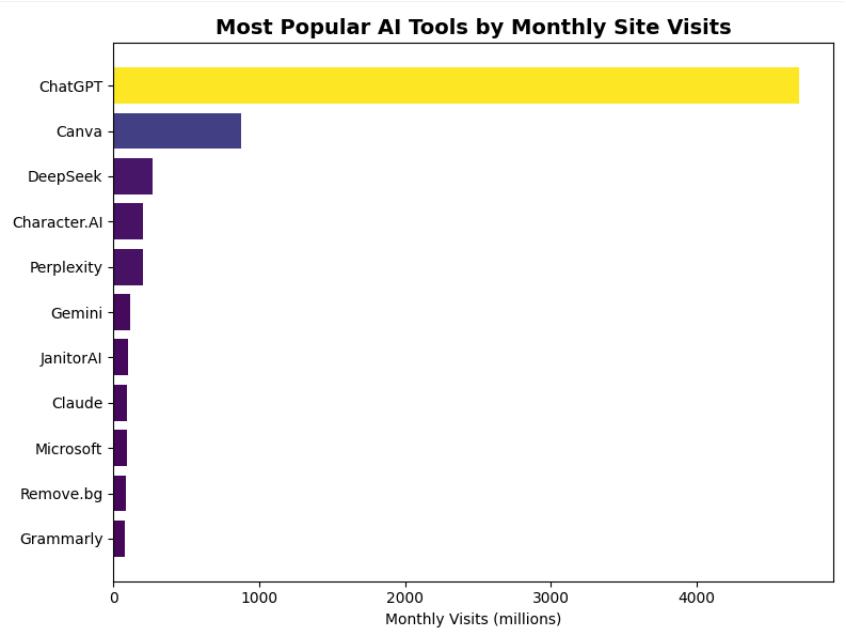

Chart 3

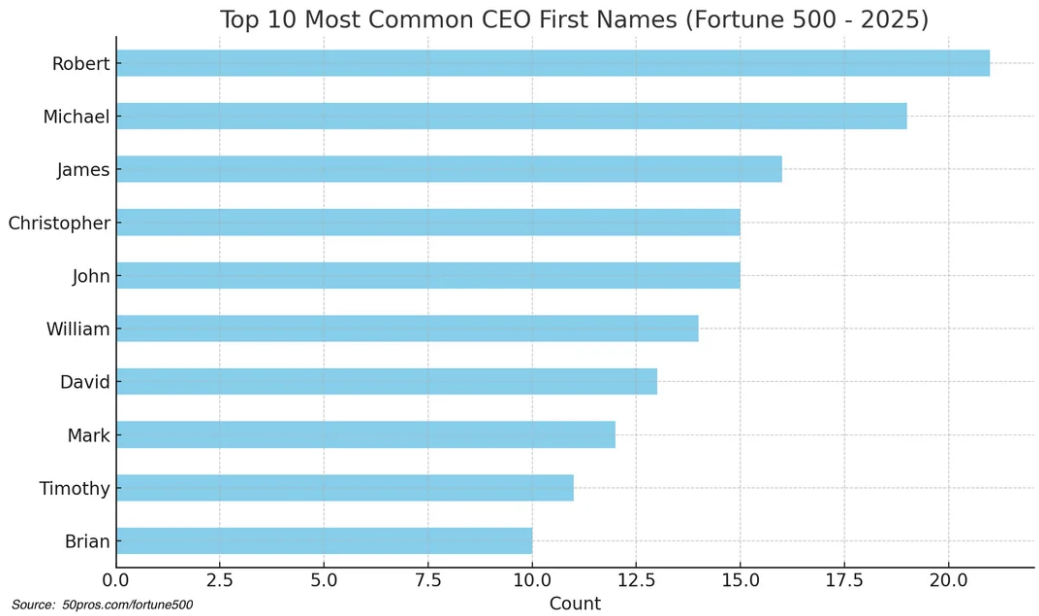
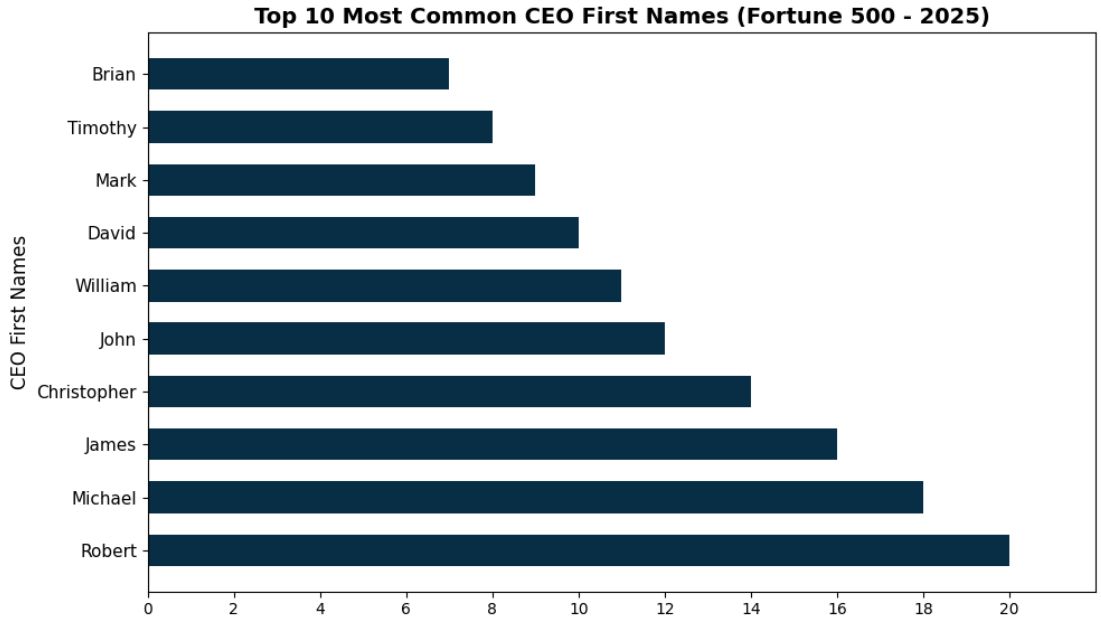


Problems:

- Unclear graph/lack of labels: Count values are unclear, and axis labeling for count is inapropriate, as its marked in fractions and people are whole beings.
- Visual issues: The light blue is too similar to the white and doesnt appropriately stand out.


Corrected:
